## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election of Group I (claim 1-7 and 10-16) in the reply filed on 12 May 2008 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Also noted the examiner examined claims 10-16 since the applicant elected Group I which consisted of claims 1-7 and 10-16 even though the applicant withdrew those claims. Only claims 8-9 were part of Group II which was not elected.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 7, 10 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Voigt (WO 00/08353).

4. Considering claim 1, Voigt (Figures 1 + 2A) teaches a tube spring (paragraph 11); a piezoelectric actuator, that is inserted into the tube spring (paragraph 1), a first cap (6), that is connected to the tube spring at a first free end of the tube spring and which is adjoined by the piezoelectric actuator, a tube-shaped body, that is connected to the tube spring by joining and is arranged in the area of a second free end of the tube

spring, and a means for pretension, that is supported by the tube-shaped body and pretensions the piezoelectric actuator (paragraph 14).

5. Considering claims 7 and 16, Voigt teaches the tube-shaped body is joined to the tube spring by welding (paragraph 11).

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. Claims 2-6 and 11-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Voigt (WO 00/08353) in view of Mattes (US PN 6326717).

9. Considering claims 2 and 11, Voigt teaches the claimed invention as described above except does not teach a body, that comprises a disc-shaped part.

In the same field of endeavor, Mattes teaches a body, that comprises a disc-shaped part (20) for the benefit of producing a cheaper to manufacture actuator.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include body, that comprises a disc-shaped part with Voigt's device for the benefit described above.

10. Considering claims 3 and 12, Mattes teaches the body being a bolt-shaped body (abstract).
11. Considering claims 4 and 13, Mattes teaches there is a thread in the tube-shaped body, that the pretension means is a screw that is screwed into the thread (abstract).
12. Considering claims 5 and 14, Mattes teaches the bolt-shaped body is spherically shaped on its shaft side (abstract).

Figure 1

13. Considering claims 6 and 15, Mattes (Figure 1) teaches the tube-shape body has a jump in its diameter on its outer circumference.
